

# Energy Performance Certificate

11, Somerset Road, Faygate, HORSHAM, RH12 0BY

Dwelling type: Mid-floor flat  
 Date of assessment: 24 October 2018  
 Date of certificate: 24 October 2018  
 Reference number: 9265-3804-7604-9928-9621  
 Type of assessment: SAP, new dwelling  
 Total floor area: 70 m<sup>2</sup>

- Use this document to:
- Compare current ratings of properties to see which properties are more energy efficient

Estimated energy costs of dwelling for 3 years: £ 879

## Estimated energy costs of this home

	Current costs	Potential costs	Potential future savings
Lighting	£ 156 over 3 years	£ 156 over 3 years	Not applicable
Heating	£ 504 over 3 years	£ 504 over 3 years	
Hot Water	£ 219 over 3 years	£ 219 over 3 years	
<b>Totals</b>	<b>£ 879</b>	<b>£ 879</b>	

These figures show how much the average household would spend in this property for heating, lighting and hot water and is not based on energy used by individual households. This excludes energy use for running appliances like TVs, computers and cookers, and electricity generated by microgeneration.

## Energy Efficiency Rating

The graph shows the current energy efficiency of your home.  
 The higher the rating the lower your fuel bills are likely to be.  
 The average energy efficiency rating for a dwelling in England and Wales is band D (rating 60).  
 The EPC rating shown here is based on standard assumptions about occupancy and energy use and may not reflect how energy is consumed by individual occupants.

**Summary of this home's energy performance related features**

Element	Description	Energy Efficiency
Walls	Average thermal transmittance 0.20 W/m <sup>2</sup> K	★★★★★
Roof	(other premises above)	—
Floor	(other premises below)	—
Windows	High performance glazing	★★★★★
Main heating	Boiler and radiators, mains gas	★★★★☆
Main heating controls	Time and temperature zone control	★★★★★
Secondary heating	None	—
Hot water	From main system	★★★★☆
Lighting	Low energy lighting in all fixed outlets	★★★★★
Air tightness	Air permeability 2.6 m <sup>3</sup> /h.m <sup>2</sup> (as tested)	★★★★★

Thermal transmittance is a measure of the rate of heat loss through a building element; the lower the value the better the energy performance.  
 Air permeability is a measure of the air tightness of a building; the lower the value the better the air tightness.

Current primary energy use per square metre of floor area: 78 kWh/m<sup>2</sup> per year

**Low and zero carbon energy sources**

Low and zero carbon energy sources are sources of energy that release either very little or no carbon dioxide into the atmosphere when they are used. Installing these sources may help reduce energy bills as well as cutting carbon. There are none provided for this home.

**Your home's heat demand**

This table shows the energy used for space and water heating by an average household in this property.

Heat demand	
Space heating (kWh per year)	1,398
Water heating (kWh per year)	1,625

If you built your own home and, as part of its construction, you installed a renewable heating system, you could receive Renewable Heat Incentive (RHI) payments. The estimated energy required for space and water heating will form the basis of the payments. For more information, search for the domestic RHI on the [www.gov.uk](http://www.gov.uk) website.

**Recommendations**

None.

### About this document and the data in it

This document has been produced following an energy assessment undertaken by a qualified Energy Assessor, accredited by NES. You can obtain contact details of the Accreditation Scheme at [www.nesid.co.uk](http://www.nesid.co.uk).

A copy of this certificate has been lodged on a national register as a requirement under the Energy Performance of Buildings Regulations 2012 as amended. It will be made available via the online search function at [www.epcregister.com](http://www.epcregister.com). The certificate (including the building address) and other data about the building collected during the energy assessment but not shown on the certificate, for instance heating system data, will be made publicly available at [www.opendatacommunities.org](http://www.opendatacommunities.org).

This certificate and other data about the building may be shared with other bodies (including government departments and enforcement agencies) for research, statistical and enforcement purposes. Any personal data it contains will be processed in accordance with the General Data Protection Regulation and all applicable laws and regulations relating to the processing of personal data. For further information about this and for details about the property are used, please visit [www.epcregister.com](http://www.epcregister.com) to opt out of having information about your building made publicly available, please visit [www.epcregister.com/optout](http://www.epcregister.com/optout).

Assessor's accreditation number: NHER009983  
Assessor's name: Miss Eleanor Ballinger  
Phone number: 020 3603 1600  
E-mail address: [lisa@hodkinsonconsultancy.com](mailto:lisa@hodkinsonconsultancy.com)  
Related party disclosure: No related party

There is more information in the guidance document *Energy Performance Certificates for the marketing, sale and let of dwellings* available on the Government website at: [www.gov.uk/government/collections/energy-performance-certificates](http://www.gov.uk/government/collections/energy-performance-certificates). It explains the content and use of this document, advises on how to identify the authenticity of a certificate and how to make a complaint.

### About the impact of buildings on the environment

One of the biggest contributors to global warming is carbon dioxide. The energy we use for heating, lighting and power in homes produces over a quarter of the UK's carbon dioxide emissions.

The average household causes about 6 tonnes of carbon dioxide every year. Based on this assessment, your home currently produces approximately 1.0 tonnes of carbon dioxide every year. You could reduce emissions by switching to renewable energy sources.

The environmental impact rating is a measure of a home's impact on the environment in terms of carbon dioxide (CO<sub>2</sub>) emissions based on standardised assumptions about occupancy and energy use. The higher the rating the less impact it has on the environment.
